

25-07-2026

Agenda: ML-project - Day-1

prerequisite:

- 1) Pandas, Numpy
- 2) Feature Engineering
- 3) Data visualization
- 4) stats basic
- 5) python environments (uv, venv, conda)
- 6) OOP
- 7) Streamlit
- 8) Fastapi
- 9) Docker
- 10) Machine learning
- 11) Docker desktop/cli

Expectation:

Data → FE → Models → save → load → prediction function
(.ipynb)

python script → class & object (predict)
(.py)

Streamlit application

UI (.py)

api end-points (.py)

Dockerfile

Build the image → run the container

github

Test if working locally

Yes

public port, api
↑
streamlit

Docker container

git clone
repo

setup

AWS

create account

concept (iam, iam profile, root)

EC2 instance

loan approval data →

features → attributes of customer
target → loan [approved / rejected]

Data [features - 1] → model-1 → A
R

Data [features - 2] → model-2 → amount
